## ONE VARIATIONS

### ONE Double Scissor Lift

AGILOX ONE 1,200 mm with a double scissor lifting system

Fork length 1,200 mm  
Double Scissor Lift  
max. lifting weight 750 kg  
max. lifting height 1,110 mm  
max. station height 1,000 mm

### ONE 1400

AGILOX ONE basic vehicle with lifting forks in length variant 1,400 mm

Fork length 1,400 mm  
Single Scissor Lift  
max. lifting weight 750 kg  
max. lifting height 620 mm  
max. station height 500 mm

### ONE 1600

AGILOX ONE basic vehicle with lifting forks in length variant 1,600 mm

Fork length 1,600 mm  
Single Scissor Lift  
max. lifting weight 750 kg  
max. lifting height 620 mm  
max. station height 500 mm

### ONE 1800

AGILOX ONE basic vehicle with lifting forks in length variant 1,800 mm

Fork length 1,800 mm  
Single Scissor Lift  
max. lifting weight 750 kg  
max. lifting height 620 mm  
max. station height 500 mm

## ONE ADD-ONS

### Obstacle Avoidance

Additional 3D sensor system in the direction of travel to increase safety in man-machine mixing mode

### Signal Light Package

Light signal to increase safety in man-machine mixing mode (color: blue / green / red), additional signal lights in the fork tips (color: white / yellow)

### Barcode Reader

Scanner for the detection of barcodes or QR codes

### ESD Protection

Protection or discharge measure for operation in areas with ESD requirements to prevent electrostatic charging

### Rubber guards

Rubber lips as dirt defectors in the front area of the vehicle and on the fork tips

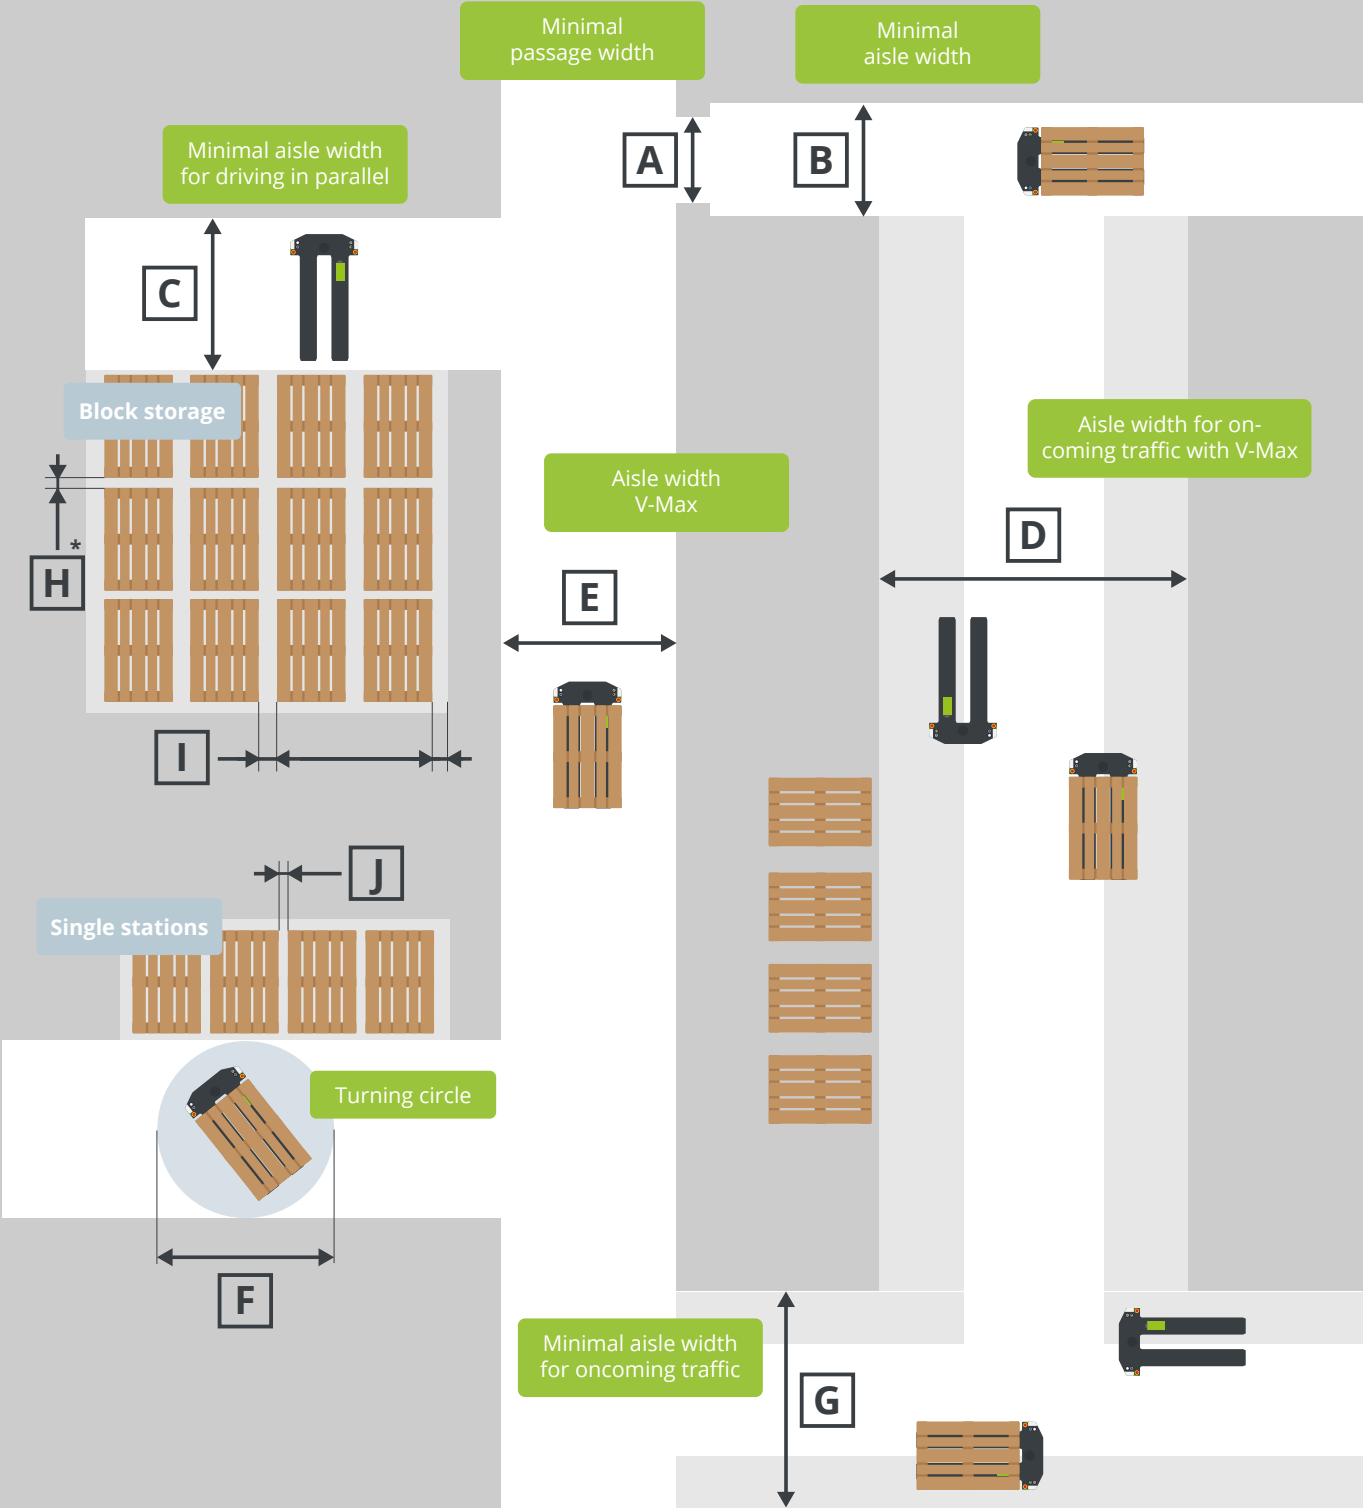

### Mobile Charging Device

One mobile charger is recommended per AGILOX fleet (connection 230V / 16A)

# WITH THE AGILOX BOX CARRIER, BOXES AND TRAYS CAN BE TRANSPORTED EFFORTLESSLY

## BOX CARRIER

The AGILOX BCO (Box Carrier) is an additional module that the AGILOX ONE can hold like a Euro pallet. Power and controls are transmitted via CAN bus and the connection is made automatically – no human intervention is necessary to complete the retooling process. The upper part standard consists of two belt conveyors. On request, the conveyor technology can be expanded to up to eight conveyors on four levels.

# THE AGILOX IO BOX MAKES THE COMMUNICATION WITH PERIPHERAL DEVICES POSSIBLE

## AGILOX IO

The AGILOX IO is an industrial control system (optionally Beckhoff or Siemens) with potential-free relay outputs and digital inputs (24VDC), which is connected to the AGILOX network. It can be used as an interface with the system operator's automation world and connects fieldbus systems and the IOs with the AGILOX network to ensure the required data exchange.

## AGILOX IPC - GATEWAY APPLIANCE

AGILOX swarms do not need a master computer, the vehicles communicate with each other via WLAN and via this path they also communicate with higher-level IT systems (e.g. ERP, WMS, MES). In order to provide a permanently available contact person for these higher-level systems, who can also be reached via Ethernet, there is the Gateway Appliance. This instance consists of an industrial PC running the AGILOX Core Software. This means that orders from higher-level systems can also be transferred to the AGILOX system if, for example, all AGILOX vehicles are switched off or no WLAN is available at the moment.

IPC

Type	Simple IPC

# AGILOX ANALYTICS

## Guaranteed data safety

## Detailed data reports

The screenshot displays the ARIIX dashboard with a green sidebar on the left containing icons for Home, Dashboard, Reports, Analytics, Settings, and Profile. The main content area is divided into several sections:

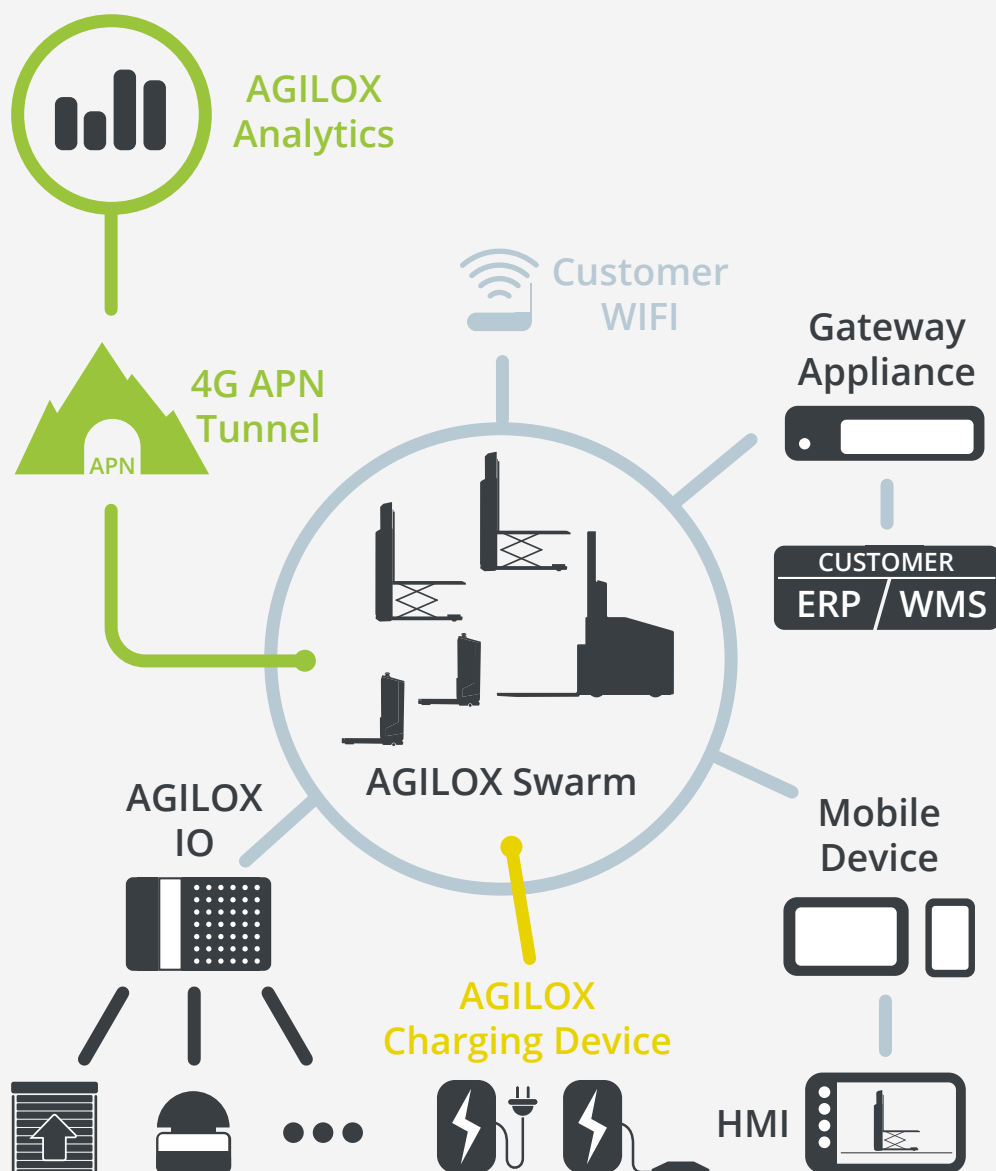

- Performance Overview:** Features three large colored boxes (green, orange, and blue) showing key metrics: 62.1% (up), 05.1% (up), and 32.1% (down). Below these are two smaller boxes: one showing 3718 (up) and another showing 587t (up).
- Summary:** A section on the right showing a 560km distance, a 587t weight, and a 3718x value, accompanied by a small icon of a person and a truck.
- Productivity Analysis:** A row of ten circular progress indicators showing percentages: 82.1%, 88%, 9%, 4.2%, 1.8%, 8.1%, 1.4%, 1.2%, 3.4%, and 15.4%. Each indicator is labeled with a category: BOLD, COMBO, BOLDING FOR BOLD, BOLDING FOR BOLD, BOLDING FOR BOLD, BOLDING FOR BOLD, BOLDING FOR BOLD, BOLDING FOR BOLD, BOLDING FOR BOLD, and BOLDING FOR BOLD.
- Productivity Index:** A line chart at the bottom showing a trend over time, with a legend indicating different data series.

[illegible]

## AGILOX

### SYSTEM OVERVIEW

The use of an AGILOX AMR is possible without adjustments and additions to the IT infrastructure. Thanks to swarm intelligence, neither a software nor a separate server for a master computer must be installed. AGILOX' plug and perform quality only requires customer provided WiFi and a 3-phase AC power connection. Open interfaces also allow the system to be flexibly and dynamically connected with the environment. Since navigation takes place without additional infrastructure, the system adapts to its changing environment almost automatically and adheres to the highest security standards.

#### AGILOX Charging

24/7 operations without changing the battery.  
60 minutes of operation - 3 minutes to charge.

#### Customer WIFI

Customer-provided WiFi is required in order for vehicles to communicate with each other.

#### Customer ERP / WMS

Customer systems (e.g. ERP, WMS, MES, etc.) can be connected via the AGILOX JSON API.

#### AGILOX Swarm

Swarm Intelligence underpins the AGILOX fleet's navigation.

#### Mobile Device

The AMRs are controlled via mobile devices (e.g. smartphone, tablet, etc.) with browser access.

#### AGILOX HMI

The HMI is mapped in the web browser and is always available to interact with AGILOX vehicles.

#### AGILOX IO Box

The IO Box assists the customer in connecting their existing infrastructure (e.g. roller doors, fire alarm systems) with the AGILOX network.

#### AGILOX Analytics

Access to the most important KPIs and data anytime and anywhere.
